

CSE 110 Group 2: Team King Julian

Github Repo link: <https://github.com/cse110-sp24-group2/warmup-exercise>

Youtube Link: https://www.youtube.com/watch?v=qMnSfuRT7I0&ab_channel=BrianMorse

Strength:

Made a very good-looking UI

Necessary features available - being able to click on dates to view old entries, adding new entries, navigate to various parts of the calendar

Team members all involved

Weaknesses:

Ensuring to use issues and tying to pull requests.

Started late

Need to spend more time planning

Background image clarity/sizing

Opportunity:

Can expand off this warmup for planning for the main project

Can reorganize to create tickets earlier and get started earlier

Threat:

Time commitment/availability. We are having some difficulty finding a time that matches for everyone.

Skills. Partially resolved with the Javascript lab and other labs coming out early

Overall Summary:

While it took a while for the ball to get rolling, we eventually set up a lot of the formalities and processes to ensure good practices, this should help us set it up earlier on future projects. We learned the importance of having a plan ahead of time so that everyone will be able to understand what is expected of them and have a guide to go off of for their work. In the end, we were able to apply some of our good practices and even got to test and improve our skills with the base languages.
